

Community Gardens Biodiversity Project

Dr. Parwinder Grewal, Kevin Power, and Dr. Mary Gardiner

The Ohio State University-OARDC, Wooster OH

Community gardens, just like other types of gardens and agricultural crops rely on insects like for crop pollination and control of pests. Your garden is part of a network of locations in Cleveland and Akron where student researchers are collecting data on these “good bugs”.

Students collect their data using:

Yellow sticky card traps to monitor lady beetles

Pan traps to collect native and managed bees

Egg cards to measure pest control

We all really appreciate your support of this work, if you see sampling equipment in your plot please do not disturb it. If you have questions or would like more information feel free to contact us!
